How Genesys 'Miracle' works

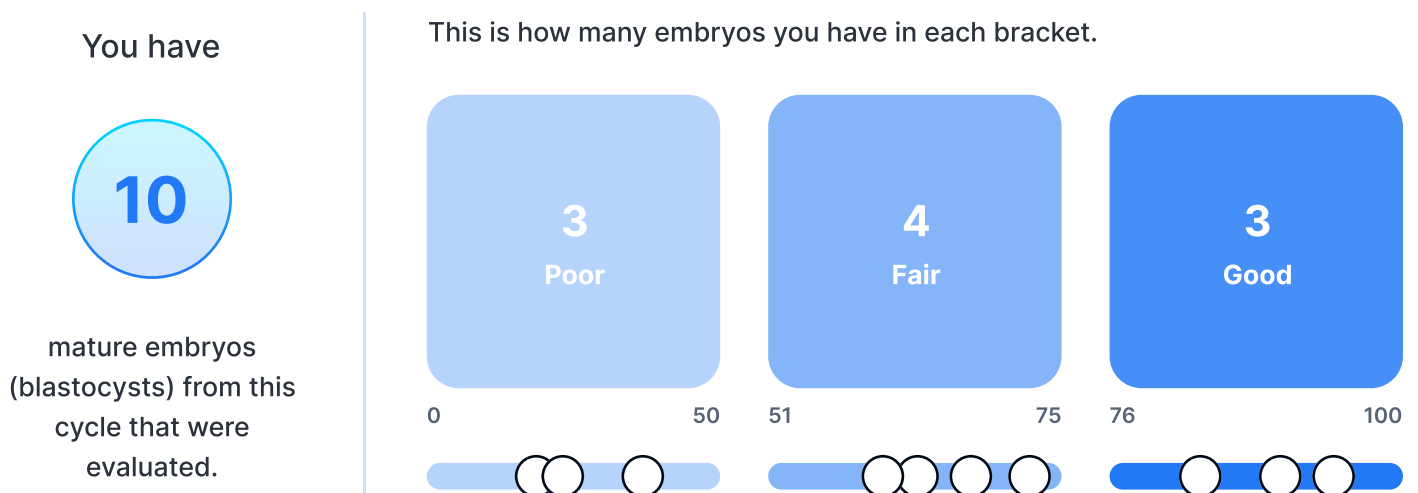

Our Advanced AI and proprietary machine learning algorithm can identify very complex and intricate features of embryo which indicates its quality, viability and likelihood of leading to a successful pregnancy. The AI assesses various complex patterns and morphological features which are very difficult for the human eye to see. These various factors are combined together to give an overall quality assessment with implantation potential score.

What does report tells about your Embryos?

Genesys 'Miracle' gives an embryo quality confidence score from 0 to 100.

Genesys Miracle's evaluation of your embryos

Disclaimer: The confidence score reflects the confidence of the AI model that the embryo may or may not result in clinical pregnancy. It does not provide any information on the probability of a live birth. The accuracy of Genesys 'Miracle' prediction does not take into account any patient-specific factors that may influence pregnancy outcome.
